

Job Description

Reservoir Modeling Product Champion

The Reservoir Modeling Product Champion position is responsible for working closely with internal and external customers around the world to define the Fugro-Jason reservoir modeling product and service strategy and directions, and detailed product requirements. The person filling this position is also responsible for coordinating closely with the Reservoir Modeling Software Engineering Group, located in Dallas, Texas, to get the product strategy and requirements implemented in our product line. The Product Champion will also coordinate with the Fugro-Jason marketing department to plan product and service rollout strategy and contribute to the development of product collateral.

Strategic to Fugro-Jason's interests is the internal and industry adoption of quantitative integrated reservoir characterization and modeling. Central to this is the use of seismic inversion-based rock properties in reservoir modeling and the integrated use of geological and geophysical information to construct reservoir models. Of particular importance is the use of geostatistical seismic inversion results in quantitative reservoir characterization and modeling. The Reservoir Modeling Product Champion will work closely with the Geostatistical Inversion Product Champion to formulate best practices in this area.

The ideal candidate will have several years of oil company or consulting experience in reservoir modeling using one or more of the major reservoir modeling products, including Petrel, Roxar or GoCAD. Additionally, the candidate will have worked with one or more E&P software companies in the area of reservoir modeling product development, support or training. Some experience with reservoir simulation applications and knowledge of seismic interpretation and analysis would be most helpful

The candidate should have excellent communication skills so that the candidate can interact with internal and oil company customers to define product requirements and subsequently be able to communicate these to the Reservoir Modeling Engineering group.

The Product Champion is expected to stay current with the market by presenting at professional conferences, road shows and sales calls, reviewing the appropriate technical and trade literature, and taking part in consortia we sponsor.

Moderate travel is required, averaging about one international trip per month.

This position reports to the Strategic Marketing Manager and is based in Houston, Texas.

Description

- Work with internal and external reservoir modeling customers to define our product development strategy
- Work closely with software engineering to implement the reservoir modeling product strategy
- Coordinate with Marketing to define product and service rollout strategy
- Contribute to the development of product collateral
- Attend trade shows, road shows and user meetings, as required

Education

- Minimum of Bachelor's Degree in Geosciences or Petroleum Engineering
- Master's preferred

10+ years of relevant experience to include work experience in marketing on business development.
