

# Press Release

Rotterdam, 6 May 2003

## **PEMEX awards Fugro-Jason exclusive Reservoir Characterization contract to strategically incorporate Jason 3DiQ technology.**

**Petróleos Mexicanos (PEMEX)** has awarded **Jason Geosystems (Jason)**, a **Fugro Geoscience company**, an exclusive contract to provide its 3D integrated Quantitative (3DiQ™) Reservoir Characterization technology. The contract is for a two-year period, covering software, support, training and consultancy services.

Following a string of successes in exploration and development using Jason methodologies in Mexico, and after an intensive evaluation of available products in the market, PEMEX identified the Jason 3DiQ Reservoir Characterization software as strategically important software reducing uncertainties, risks, costs and cycle time associated with oil and gas discovery and production.

Jason is the world's #1 company in quantitative reservoir characterization. Jason's industry-wide popularity is due to its unique software that successfully integrates engineering reality with sub-surface modeling. Jason software substantially improves the chance of penetrating a producible reservoir by adding valuable information. Jason is a Fugro Geoscience company.
