

## Sibneft awards major contract to Fugro-Jason

Rotterdam, October 2, 2003

**Sibneft-Noyabryskneftgas OAO has awarded Fugro-Jason a major contract to perform an integrated field study on the Vyangayakinskoe field in Siberia.** Sibneft-Noyabryskneftgas, located in Noyabrysk in Western Siberia, is the largest producing unit of Sibneft.

The objective of the study is to provide the reservoir model of the field using recently acquired 3D seismic and logs from 200 wells. Key component of the study will be Jason's 3DiQ™ Reservoir Characterization technology. The reservoir model will assist Sibneft to re-evaluate the remaining recoverable reserves of the field, and to plan development and appraisal wells to be drilled in existing and newly discovered reservoir zones.

Fugro-Jason will provide the software and consultancy services from its Moscow office, operating the expanding Russian upstream market.

Fugro-Jason is the global market leader in quantitative reservoir characterization. Fugro-Jason is part of the Fugro Geoscience division.
