

PowerLogSE introduced to the industry

Rotterdam, May 10, 2004

Market leading

Petcom's **PowerLog™** is the market leading, Windows™-based, high performance analytical software for petrophysical interpretation since the early 90's. This powerful and user friendly application allows both geoscientists and petrophysicist to optimize well log interpretation workflows.

Resulting from a commitment to development and support

Since Fugro-Jason acquired Petcom, the two companies have been aggressively addressing both short- and long-term goals for PowerLog's future development and global support.

Petcom's **PowerLogSE**, the "*Second Edition*" release of PowerLog, is a first result of these continuing development efforts. With PowerLogSE, Petcom is introducing an updated user interface and an entirely new cross-section montage capability in PowerLogSE's built-in **Collage Tool**.

As a result, users can now include, and correlate, depth-registered graphical images such as scanned log plots and maps (raster images), and even core photo images, along with interpreted well log data. Of course, PowerLog's well-known and widely-used interpretation capabilities are still an integral part of this enhanced solution.

In addition to PowerLog's expanding functionality, users of PowerLogSE continue to have access to a growing technical support and services network of petrophysicists and rockphysics specialists in Fugro-Jason's local offices around the world.

Industry introduction

PowerLogSE will be introduced to the industry at the upcoming SPWLA annual conference in Noordwijk as well as at the EAGE annual conference in Paris.
