FOR IMMEDIATE RELEASE

Fugro-Jason Recognized at 2004 World Oil Awards

Company named finalist for Best Exploration Solution Award

November 10, 2004—Houston, Texas – Fugro-Jason, the leader in reservoir characterization, announced today that it was selected as a finalist for the 2004 World Oil Awards. At the third annual black-tie gala dinner in Houston, the company was recognized along with other finalists for their significant achievements. The event benefited three universities with programs leading to careers in the petroleum industry, and was attended by nearly 400 industry leaders.

“The World Oil Awards, now in its third year, recognizes outstanding achievements and fosters new innovations in the oil and gas industry,” explained John “Rusty” Meador, President/CEO of Gulf Publishing Company.

Fugro-Jason was singled out for its simultaneous inversion capability provided by its RockTrace product. RockTrace is the only technology that quantitatively integrates well log elastic rock properties and AVA seismic to produce calibrated quantitative 3D volumes of rock properties.

“We are proud to be recognized for our innovation,” commented Eric Adams, President of Fugro-Jason. “We have always believed that only through continuous research and development can we build solutions that bring the greatest return on investment to our clients.”

About Fugro-Jason

More than 15 years ago Fugro-Jason set off to find a better way to get More Oil with Less Toil™. A wealth of data was available to geologists, geophysicists and engineers searching for reservoirs, but its true value would only be revealed if the data could be combined. The company dedicated itself to making that possible.

In 1993 Fugro-Jason’s first client began using the Jason Workbench for seismic inversion. Since that time a great deal of additional capability has been added, making it possible to integrate geological, geophysical, petrophysical and rock mechanics information into a single consistent model of the earth.

Fugro-Jason is the low risk option

- Modular software enables flexible workflows.
- Expert service team extends your team.
- Continuous investment in research and development.
- Real-world ideas flow from the Fugro-Jason service team to R&D.
- Software and algorithms are owned by Fugro-Jason.
- Solutions steadily broaden to meet new needs.
- You choose if you want software or services.
