Pemex Commits to Intensive Training Series with Fugro-Jason

Workshop to focus on seismic inversion and reservoir characterization

Sept. 1, 2007—Houston, Texas – Fugro-Jason today announced that Pemex has committed to two five-month training sessions, each with approximately six students. These sessions, beginning in July 2007 and extending to July 2008 will be held at Fugro-Jason offices in Houston.

“Pemex shows great leadership in taking the initiative to fully train their personnel on best practices in reservoir characterization,” said Carlos Spindola, Fugro-Jason Region Manager for Mexico. “This intensive series will prepare Pemex to enhance reservoir performance.”

Pemex students will be trained on the concepts of seismic inversion and the techniques available through Fugro-Jason software products. The Jason Geoscience Workbench (JGW) will be the primary tool used in exercises throughout the course.

“Pemex is a long-time customer of Fugro-Jason,” said Eric Adams. “We are pleased to be able to offer this intensive training to them, as it will allow them to gain even greater value from our relationship.”

About Fugro-Jason

Fugro-Jason is dedicated to delivering new and better ways to enhance reservoir performance. The company’s products and services integrate geological, geophysical, geostatistical, petrophysical and rock physics information into a single consistent model of the subsurface. Introduced in 1993, the Jason Geoscience Workbench is used by all major exploration companies to improve their drilling programs. PowerBench offers Windows®-based petrophysics, geology, interpretation, and modeling in a single integrated environment. The Fugro-Jason Reservoir Services group has performed hundreds of reservoir characterization projects for clients around the globe and in virtually every geological setting. Fugro-Jason is headquartered in Houston, Texas and has more than 20 offices worldwide. www.fugro-jason.com.
