### **Fugro-Jason Announces EarthModel® FT 4.1 Geologic Modeling Software**

Completes incorporation of model building capabilities into the Jason Geoscience Workbench products

**February 16, 2009—Dallas, TX**—Fugro-Jason ([www.fugro-jason.com](http://www.fugro-jason.com)) today announced EarthModel FT 4.1, the latest version of our geologic modeling software, completing the transition of the FT technology into the Jason Geoscience Workbench family of products. EarthModel FT 4.1 is built upon the UpdateAbility™ and TrackAbility™ capabilities that allow geomodelers to quickly update their subsurface models to keep pace with the changing understanding provided by new wells, production information, etc. Fugro-Jason is a leader in [reservoir characterization technology](#) for the oil and gas industry.

“Fugro-Jason acquired Volumetrix and their product Volumetrix FastTracker in 2003, and the stratigraphic grid building and deterministic model building capabilities were incorporated into the Jason Geoscience Workbench (JGW) as EarthModel FT for Low Frequency Modeling.” said Joe Jacquot, Strategic Marketing Manager for Fugro-Jason. “Now the stochastic modeling and upscaling capabilities are being released within the JGW environment in the EarthModel FT 4.1 release. The entire geologic modeling product line is now called EarthModel FT Geologic Modeling Software.”

“Fugro-Jason is a leader in Seismic to Simulation technology,” said Eric Adams, Fugro-Jason Managing Director. “The stochastic modeling and upscaling capabilities added to EarthModel FT 4.1 streamline the link from Petrophysics - Rock Physics to Rock Properties from Seismic into dynamic reservoir simulation models, increasing our customers’ ability to build accurate reservoir models that yield accurate production forecasts.”

EarthModel FT 4.1 Geologic Modeling Software will be available as a standalone system beginning March 8, 2010, and as additional Modules in the Jason Geoscience Workbench in the third quarter of 2010. Contact Fugro-Jason for pricing and further details.

#### **About Fugro-Jason**

Fugro-Jason is dedicated to delivering innovative products and services to help our clients identify and produce hydrocarbon deposits by integrating information from the various geoscience disciplines. In 1993 Fugro-Jason introduced the Jason Geoscience Workbench, making it possible to integrate geological, geophysical, geostatistical, petrophysical and rock physics information into a single consistent model of the earth. PowerLog has been part of the Fugro-Jason technology suite since 2002. The application of Fugro-Jason’s technology substantially improves returns on E&P investments by adding invaluable information that reduces the risks, costs and cycle-times associated with field development.

Fugro-Jason is a unit of [Fugro NV](#). Fugro was founded in 1962, and is listed on Euronext NV, Amsterdam, the Netherlands. Fugro has more than 13,500 staff and a permanent presence in over 50 countries.
