Re: Jason software and service

This letter is to thank both you and your company for all of the service you provided this past year while I was working in Houston.

I used the Jason system personally for several different interpretation and seismic analysis projects in the Gulf of Mexico and found the software to be both reliable and powerful. The software provided virtually all of the tools I needed to analyze my seismic data.

In addition, I also had the privilege to see the results of a simultaneous inversion that your company provided for another group within bp. The results appeared to be extremely accurate based on ties with existing wells and have led to a much higher level of understanding of the geology of the area.

Finally, I wish to say that you and your company provided exceptional service whenever I needed assistance in finding out about new options and products within the software. I personally enjoyed working with you and hope that we will remain in contact as I continue to work elsewhere in the bp world.

I will continue to use Jason here in Canada and am confident that your Calgary office will provide the same high standard of care and attention that was evident in Houston.

Yours truly,

David Timko  
Geophysicist
