Laura Gimenez, Fugro-Jason
6100 Hilcroft Suite 200
Houston, TX 77081

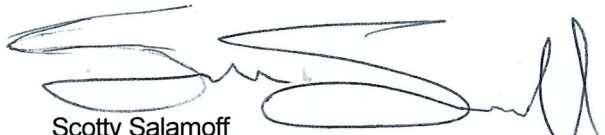

Dear Laura:

I wish to commend the quality of services provided by you and Fugro-Jason during the inversion of the BM92 seismic dataset, which started in late 2007 and completed in February 2008. The delivered product has proved to be a useful investment and a key asset to the Bay Marchand development team. Since receiving the inverted dataset, we have successfully used it to identify potential targets and their geometries. Additionally, we feel that Fugro-Jason did an excellent job at inverting data that was problematic during the initial processing.

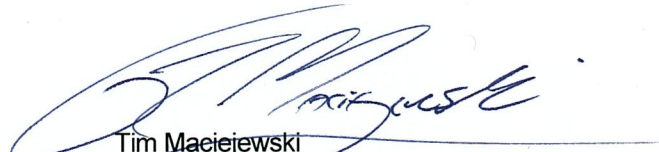

I would also like to commend your personal involvement in the project, as well as that of Art Valdez, Howard Titchmarsh, and Howard Rael – the quality of the final product reflects the level of commitment and ownership of the project that we have come to expect from Fugro-Jason. The deliverable was certainly top-tier.

Once again, thank you for your excellent work and personal commitment during the execution of this project. Fugro-Jason will certainly be highly recommended for future projects.

Sincerely,

Scotty Salamoff
