

PERUSAHAAN PERTAMBANGAN MINYAK & GAS BUMI NEGARA
(PERTAMINA)

Letter of recommendation

To whom it may concern,

Pertamina have been using Jason Geoscience Workbench for only 4 months. Even We are only in short period for using it we are satisfied with its capability in inverting 2D seismic data and also 3D seismic data.

The many option in inversion module is very useful and it allows us to pick the best inversion for different data set also for different purpose in Exploration and development.

The data link between Jason and other software is very good and it make the job easier.

We hope that our good experience with Jason will be useful for others using it
